PROFESSIONAL SUMMARY

Computer Systems Engineering graduate (Instituto Tecnológico de Toluca, 2026) with a one-year professional residency at Daimler Truck México, where I helped reengineer Human Resources modules from ASP Classic to React and .NET 8 and built Power BI dashboards on top of SQL Server. On my own, I build native Android apps with Kotlin and Jetpack Compose, web tools, and infrastructure projects on Linux and Docker. I enjoy the full stretch between capturing a data point and turning it into something people can use. I know SOLID principles from coursework and try to apply them in my code.

CORE COMPETENCIES

Backend: REST APIs in C#/.NET 8 (Web API and MVC) with Entity Framework and LINQ; personal APIs in FastAPI (Python) and Express (Node.js). JSON-based data exchange.

Web frontend: React, TypeScript, JavaScript, Tailwind CSS, Next.js, and Astro.

Mobile: Kotlin + Jetpack Compose (Room, Hilt, Media3, WorkManager, Coroutines/Flow); Flutter (2+ years); React Native.

Data and BI: SQL Server (data modeling and CTEs), Power BI, advanced Excel and Power Query, Python (pandas, Plotly).

Infrastructure: Linux as daily driver, Docker, Git/GitHub, a first CI pipeline with GitHub Actions (build + lint), Cisco networking (CCNAv7).

Quality: Unit testing in C#/.NET, JavaScript, and Kotlin; Android integration tests with Firebase Emulator; API testing with Postman and Swagger; troubleshooting through log review.

PROFESSIONAL EXPERIENCE

Intern Project · Professional Residency (DevOps, OPT – HR Technology team) *Aug 2025 – Jul 2026*

Daimler Truck México · Santiago Tianguistenco, State of Mexico

- Reengineered three Human Resources modules (overtime, area change requests, and Impact Compass Navigator evaluations) from ASP Classic to React/TypeScript and .NET 8 on the company's internal platform.
- Built .NET Web APIs with Entity Framework and LINQ on SQL Server, including data modeling and CTE-based queries.
- Built Power BI dashboards for the HR team using data produced by the modules.
- Wrote unit tests focused on data-transformation functions to ensure data integrity; diagnosed issues through log review.
- Supported a colleague's Power Apps application so the process no longer depended on opening Excel files; worked with SharePoint.
- Documented modules with UML diagrams, reported progress in stand-ups three times a week, and used Git for version control.

PROJECTS AND ACHIEVEMENTS

1st Place · Genius Arena Hackathon 2025 (Coppel Challenge) *(Team project)* — Microentrepreneurs app in React Native + Firebase with a voice-recognition module using OpenAI's speech-to-text API. I built gamified UI components, the NativeWind design system, and a collaborator-management dashboard with a defined color-token system.

Financial Help · Android *(In progress)* — Local-first personal finance app in Kotlin and Compose using MVVM, Room, Hilt, Coroutines/Flow, and WorkManager; financial events are the source of truth and balances are computed from them. Initial Room → Firestore sync infrastructure with Firebase Auth, covered by 32 integration tests (Firebase Emulator) and 10 unit tests.

SoundPulse · Android *(In progress)* — Music player in Kotlin and Compose with Media3/ExoPlayer in a MediaSessionService, Hilt, and DataStore. Workflow with feature/develop branches, Conventional Commits, one tag per phase, and GitHub Actions CI (build + lint).

Ops Terminal · Web *(Completed)* — Personal project tracker with a CRT-terminal look: tasks with status, priority, and due date, plus per-project work streaks. React + Tailwind CSS with Supabase (PostgreSQL) as backend.

Technical Journal · Web *(Live)* — Platform for publishing technical case studies, built with Next.js + MDX, TypeScript, Tailwind CSS, and shadcn/ui: automatic table of contents, reading progress, responsive layout, and multilingual support.

Homeserver · Infrastructure *(Ongoing)* — Personal Linux (Fedora) server with Docker; key-based SSH authentication and SELinux context fixes. Being rewritten in Rust with a modular logging architecture and explicit dependency rules between modules.

Employee Attrition Analysis (IBM HR Analytics) · Data — Exploratory analysis in Python with pandas, SQLite/SQLAlchemy, Plotly, and Jupyter.

IPv4 Subnetting Calculator · Web *(Live)* — HTML, CSS, and JavaScript tool that generates a full subnetting table from an IP address and host count.

EDUCATION AND TRAINING

B.S. in Computer Systems Engineering — Instituto Tecnológico de Toluca *2020 – 2026 · Graduate*

Technical Baccalaureate in Mechatronics — CBTIS 203

Cisco Networking Academy · CCNAv7 — Introduction to Networks; Switching, Routing and Wireless Essentials; Enterprise Networking, Security and Automation. Labs on physical equipment and Packet Tracer (VLANs, static routing, DHCP, DNS, NAT). *2024*

TOOLS AND TECHNOLOGIES

Languages: C#, TypeScript, JavaScript, Kotlin, Python, SQL, Dart, Java (academic), Rust (learning), Go (working exposure)

Frameworks: .NET 8 (Web API, MVC), Entity Framework, React, Next.js, Astro, Jetpack Compose, Flutter, React Native, FastAPI, Express, Tailwind CSS, Bootstrap

Data: SQL Server, PostgreSQL (Supabase), Firebase/Firestore, Room/SQLite, MySQL and MongoDB (academic), Power BI, advanced Excel (no macros), Power Query, pandas

DevOps and infrastructure: Docker, Git, GitHub Actions, Linux (Fedora), AWS EC2 (virtual machines), Cisco networking

Tools: Visual Studio, Postman, Swagger, Power Apps, SharePoint, UML, GitHub Copilot, Claude, ChatGPT

LANGUAGES

Spanish: native · English: B2 (upper-intermediate)
